E V E R G R E E N ™

Open Source Library Software

Modules include:
- OPAC with user services
- Circulation
- Cataloging
- Serials
- Acquisitions
- Reporting
- Booking
- Self-check
- Self-registration

Used by over 1,300 libraries

No purchase or licensing cost for software

Continuously improving through twice-yearly releases with software improvements designed and funded by users and shared with all

Support options – choose a company for support or support it yourself. Not limited to one vendor or one cost model.

Vendor-independent – no company mergers or discontinued product – greater control and financial predictability and security

Designed to meet the needs of very large consortia, it can easily scale down to smaller libraries and library systems.

Flexible organization hierarchy allows libraries to go as deep or as wide as needed, establishing relationships between physical and political locations.

Fine-grained permission settings enable administrators to determine their own balance between ease of use and strict control and accountability.

Uses standard software components on Linux.

Evergreen supports these standards and technologies: CODABAR, EDI, LDAP, MARC21, MFHD, OpenSearch, OpenURL, RDA, RSS, schema.org, SIP2, unAPI, Unicode, WCAG, Z39.50
